

TURNAMAT

For straight and bent tubes and simple and complex sect
Thorough and quick deburring for symmetrical and asymmetrica

TURNAMAT is the tube deburring machine for an economic solution for deburring of straight and bent tubes, complex shapes and tubes with stronger burrs. Without manually turning the workpiece both the inside and outside edges can be simultaneously deburred. Simultaneous workpiece feeding this means shorter set-up times! The Turnamat is also engineered to be a heavy, solid, long-life machine.

In addition to the typical rotation the radial brush also performs a second rotation: the entire drive unit also rotates so that both the inside and outside edges of the workpiece are deburred evenly.

TURNAMAT symmetrical workpieces can be changed to a different workpiece diameter via an adjustment control without the need for tools. Standard with CE certification. Asymmetrical workpieces can be safely deburred on the TURNAMAT. Work pieces can be changed easily without tools.

ADVANTAGES

Our time advantages:

- Simultaneously deburrs inner and outer edges

- No manually turning the workpiece
- Brush change in under two minutes

our quality advantage:

- High performance brushes ensure consistent results
- Residue-free deburring even on larger cross-sections

our cost advantages:

- Time saving
- Built-in drawer for swarf and debris collection
- Short ROI – less than 12 months

SPECIFICATIONS

Technical Specifications

out power	4.0 / 5.0 kW
eed	1500 + 3000 rpm

Workpiece data – Standard TURNAMAT 1 + 2

aterials	steel, stainless steel, aluminium, non-ferrous metals
urnamat	1: 20 x 20 to 120 x 120 mm, 10 x 10 to 120 x 120 mm
eburring time	1 to 5 seconds per end face

PTIONS

- Changeable front plate for precise alignment of asymmetrical workpieces
- Clamping and transverse feeding device for workpiece cross-sections to 70 x 450 mm
- External dust extraction
- Lockable castors for mobility

MOBILE DEMONSTRATION SERVICE

Nothing's more convincing than first-hand experience. We will gladly allow you to test whether our deburring system is binding. Not only here on site in Telford but also at your factory site.

That's precisely why we developed our mobile demonstration service, which will come to you. On board you will find a test on your parts.

Schedule your appointment now by calling 01952 585183 or filling out the form below
