

The **Indy Reader module** usually refers to **Impinj Indy RAIN/UHF RFID reader chips or modules**, especially **Indy RS1000 / RS2000 modules** or **Indy R2000 / R500 reader chips**.

Here are the most useful brochure/datasheet links I found:

Item	Best document	Notes
Indy Reader Chip Family	Product brochure PDF	Covers Indy reader chip family, including positioning and features.
Indy RS2000 Reader Module	Datasheet PDF	Surface-mount reader module for EPC Gen2 / ISO 18000-63 / RAIN RFID.
Indy RS1000 Reader Module	Datasheet PDF	Lower-power / moderate tag population embedded reader module.
Indy R2000 Reader Chip	Product brief PDF	High-performance chip used in gateways, handhelds, fixed readers, POS, kiosks, smart shelves, etc.
Impinj Reader Chip Portfolio	Spec comparison PDF	Compares newer E710/E510/E310 with older R2000/R500.

Important note: **Impinj says R2000 and R500 are not recommended for new designs** in one of its reader-chip comparison documents, so for a new design you should also compare **E710 / E510 / E310**.

For embedded module usage, the **Indy RS2000 datasheet** is probably the one you want first. It describes the RS2000 as a fully integrated reader solution for **EPC Gen2 / ISO 18000-63 / RAIN RFID** applications, built to make adding high-performance UHF RFID reader capability easier.

give me the download link for the PDF files

For your purpose, start with **Indy RS2000 Reader Module Datasheet** and **Indy RS2000 Product Sheet**. Those are the most relevant if you mean the embedded RFID reader module, not just the chip.

okay, give me the recent price for each item

I'll check current distributor/listing prices where available. For RFID chips/modules, prices often vary by region, quantity, and stock status, so I'll separate "public listed price" from "quote-only / unavailable."

Thought for 28s

Here is the **recent public price status** I found for each Indy-related item.

Item	Recent public price / status	My note
Indy RS2000 Reader Module / SiP	Quote only / no reliable public unit price found	Impinj began EOL for RS2000 and RS1000 reader modules on Sept. 4, 2020 , so normal distributor pricing is hard to find. DigiPart shows IPJ-RS2000-1 listings as " Inquiry " / quote only , not a public price.
Indy RS1000 Reader Module / SiP	Quote only / no reliable public unit price found	Same situation as RS2000: it is an EOL module. Public listings are mostly old, used, or unrelated complete readers, not the bare RS1000 module.
Indy R2000 Reader Chip	Quote only / discontinued	BarcodeGiant lists IPJ-R2000 as discontinued and says price cannot be shown publicly; Impinj started EOL for R2000/R500 reader chips on Sept. 30, 2022 .
Indy R500 Reader Chip	Quote only / discontinued	BarcodeInc/BarcodeDiscount list IPJ-R500 as discontinued or price-hidden/quote-only; Impinj's EOL notice covers R500 too.

Third-party R2000-based UHF RFID reader modules	Around US\$30–150+ depending on supplier/spec	Alibaba listings for “Indy R2000 reader module” show broad ranges such as \$33–57, \$40–99, \$80–150 , etc. But these are usually third-party reader modules using an Impinj R2000 chip , not official Impinj Indy RS2000 modules.
Third-party complete R2000 fixed reader	Around US\$233+	One Made-in-China listing shows a 4-port Impinj R2000 UHF split reader at US\$233/piece , MOQ 2. Again, this is a complete reader, not the bare Impinj chip/module.
Indy brochure / datasheet PDFs	Free	The brochure/datasheet files themselves are free downloads; only the physical chips/modules/readers have prices.

Important buying advice: for a new product design, I would **not choose RS1000, RS2000, R2000, or R500** unless you are repairing an existing design. Impinj’s own reader-chip documents say **R2000 and R500 are not recommended for new designs**, and the RS1000/RS2000 modules are EOL.

For a new design, check **Impinj E710 / E510 / E310 / E910-based modules** instead.
