

give me the datasheet for wholesale RFID thick card
EM4200 thickness clamshell Card with pouch hole,
13.56Mhz, 540Byte

I'm checking the product details and matching the specs, then I'll turn that into a clean datasheet-style summary.

Thought for 16s

I found a **spec mismatch** in the product name you gave:

- **EM4200** is normally a **125 kHz LF** chip, not **13.56 MHz**. It is also a **read-only low-capacity ID chip**, not a **540-byte HF/NFC memory chip**. GYRFID Store +2
- **540 bytes at 13.56 MHz** matches **NTAG215** much more closely. A supplier reference listing RFID chip options shows **NTAG215 = 13.56 MHz, 540 byte, read/write**, while **EM4200** appears under **125 kHz** options. RFID & NFC Sol... +1

So the listing you provided is likely one of these cases:

1. the seller mixed **EM4200** and **13.56 MHz / 540 byte** in the same title by mistake, or
2. the card body is a **clamshell thick card with pouch hole**, but the actual chip should be **NTAG215** rather than **EM4200**. RFID & NFC Sol... +1

Datasheet-style summary

Wholesale RFID Thick Card / Clamshell Card with Pouch Hole

Claimed listing: "EM4200 thickness clamshell card with pouch hole, 13.56 MHz, 540 Byte"

Product type

Thick RFID clamshell-style card with a slot / pouch hole for lanyard or badge holder use.

This form factor is commonly offered across LF, HF, and UHF variants. U Smart Cards

Likely correct chip/frequency combination

- **Most likely actual chip:** **NTAG215**
- **Operating frequency:** **13.56 MHz**
- **Memory:** **540 bytes**
- **Interface family:** **HF / NFC** RFID & NFC Sol...

Why this is likely

- **EM4200** is associated with **125 kHz LF** products. GYRFID Store +2
- **NTAG215** is associated with **13.56 MHz** and **540-byte** memory. RFID & NFC Sol...

Technical sheet

Item	Value
Product form	Thick / clamshell RFID card
Mounting style	Pouch hole / slot hole
Claimed frequency	13.56 MHz
Claimed memory	540 Byte
Claimed chip	EM4200
Consistency check	Inconsistent
Likely actual chip	NTAG215
Likely technology	HF / NFC card
Typical use	Access control, ID badge, attendance, membership

Important note on chip identity

If the chip is really EM4200

Then the expected specs should be closer to:

- **Frequency:** 125 kHz
- **Type:** LF proximity ID chip
- **Mode:** typically read-only ID style usage, not 540-byte NFC memory. GYRFID Store +2

If the card is really 13.56 MHz / 540 Byte

Then it is much more likely:

- **Chip:** NTAG215
- **Type:** HF / NFC
- **Memory:** 540 bytes
- **Mode:** read/write NFC tag/card. RFID & NFC Sol...

Recommended purchasing check

Before buying, ask the seller to confirm these exact items:

- chip model
- operating frequency
- protocol / standard
- memory capacity
- read-only or read/write
- card dimensions and thickness
- hole size and position

Bottom line

The title as written is **technically contradictory**.

EM4200 and **13.56 MHz / 540 Byte** do **not** match each other. The most likely correct interpretation is:

"RFID thick clamshell card with pouch hole, 13.56 MHz, 540 Byte, probably NTAG215."

RFID & NFC Sol... +2

I can also make this into a **clean one-page PDF-style datasheet sheet** next.

 Sources

okay, please and give me the price for ti

I'm looking for current seller listings for this exact thick card format and matching the chip/frequency combinations so the price estimate stays grounded.

give me the price for it

I'm pulling current web listings now and will give you a recent price range with the chip mismatch called out clearly so you can compare the right product.

Thought for 14s

Here is the **recent price range** I found for this type of card.

Price

Because the title is inconsistent, there are **2 realistic price ranges** depending on the actual chip:

1) If it is really EM4200 / 125 kHz clamshell thick card

Typical wholesale price is about:

- **US\$0.05 to US\$0.11 / piece** on large-quantity listings Alibaba +2
- Another clamshell listing shows **US\$0.155 to US\$0.255 / piece** at 500 pcs MOQ, which is on the higher side. Hyan Smartech

2) If it is really 13.56 MHz / 540 Byte

This is more likely **NTAG215-class**, not EM4200.

Typical wholesale price is about:

- **US\$0.10 to US\$0.20 / piece** for 13.56 MHz NTAG213/215/216 card listings. Made-in-China +1
- Some 13.56 MHz clamshell/thick-card listings are around **US\$0.08 to US\$0.14 / piece** depending on quantity. hecere.en.made-... +2

Best practical estimate

For the product name you gave, I would quote it like this:

- **Estimated unit price: US\$0.08 to US\$0.20 / piece**
- **Safer target for budgeting: about US\$0.10 to US\$0.15 / piece** for wholesale quantities Made-in-China +2

Important note

Your title says:

- **EM4200**
- **13.56 MHz**
- **540 Byte**

Those specs do **not** normally belong together. EM4200 is generally a **125 kHz LF chip**, while **13.56 MHz / 540 Byte** aligns more with **NTAG215-type HF/NFC cards**. Alibaba +1

If you want, I can make a **clean one-page datasheet + price sheet** for this card next.
