

Manual Deburring Machine

You'll cut your cleanup time in half with the ERSM® RMD-165 manual deburring machine.

Unlike angle grinders or orbital sanders that rely on operator skill for consistency, this tool makes it **easy to remove burrs** and **gently round edges** on parts straight off a laser cutter, punch press, or stamping line. Just guide the workpiece under the spinning deburring head, and you'll achieve the same smooth finish on every piece—whether you're tackling razor-sharp corners or smoothing out rough, sawtooth profiles. With the RMD-165 at your station, you get repeatable, shop-floor precision **without the constant reworking** that comes from handheld grinders.

ERSM® RMD-165

Manual Deburring Machines to Deburr, Edge Round & Polishing For Punched & Laser Cut Parts

See For Yourself: The Video Of The ERSM® RMD-165!

Traditionally, deburring metal parts from laser, plasma, or punch operations meant choosing between time-consuming hand tools or investing in expensive through-feed systems. The RMD-165 Series steps in as a middle-ground option, offering a semi-automatic approach that speeds up your workflow without the high price tag.

Why Our Machines Make Most Users Feel At Ease

You'll appreciate how effortlessly the **pneumatic-floating grinding head** glides over the workpiece—simply press down lightly, and the system delivers just the right grinding pressure. The **vacuum-chuck worktable** holds parts flat without any clamps, so you can focus on the grind instead of fixturing. Depending on your parts, you can configure the grinder with the optimal number of abrasive disks, and the **dual-head setup**—one coarse, one fine—swaps heads in just two seconds. Even if your component exceeds the table's footprint, as long as it's within the **arm's swing radius**, you can still grind it with precision.

Technical Data Overview

Processing	Manual
Material thickness	1-150mm
Working range of cantilever	1500mm*360°
Vacuum operating area	330×300 mm
Sand Size	φ150mm
Brush Size	φ165mm
Grinding Head Quantity	2
Machine Size	1700*1700*1700mm

Grinding Head Power	0.75kW

Frequently Asked Questions

Can I Adjust Grinding Speed And Pressure To Match Different Materials?

Absolutely. The RMD-165 comes with a servo-driven motor and an intuitive touchscreen interface. You choose your desired RPM range—whether you’re working on tough stainless, mild steel, or soft aluminum—and the machine automatically maintains that speed under load. If you need lighter pressure for fragile parts, simply guide the pneumatic-floating head with a gentle touch; if you’re grinding heavy burrs, press down slightly more and the head compensates by delivering the right amount of torque. In other words, you get precise control over both speed and pressure for high-quality results on any metal.

RMD-165 Manual Deburring Machines Advantages

- **Pneumatic-Floating Grinding Head:** Light touch delivers the required grinding force
- **Vacuum-Chuck Worktable:** Secures parts without the need for additional fixturing
- **Quick-Change Consumables:** Switch between coarse and fine wheels in 2 seconds
- **Dual Grinding Heads:** Accommodate both rough grinding and fine finishing
- **Swing-Arm Design:** Processes parts larger than the worktable footprint
- **Compact Footprint:** Ideal for space-constrained work environments
- **Multi-Language Touchscreen Control:** Intuitive operation with no learning curve
- **Integrated Cooling & Chip Extraction:** Maintains grinding efficiency and work area cleanliness

How Can The RMD-165 Deburring Machine Handle Parts That Exceed The Working-Table Area?

1. **Swing-Arm Design:** The RMD-165 is built with a pivoting swing arm that extends beyond the tabletop’s edges. As long as your part falls within the swing arm’s reach, you can grind and deburr it even if it overhangs the table.

2. **Vacuum-Grip Worktable:** A powerful vacuum hold-down area secures larger workpieces without extra fixtures. The suction keeps the part firmly in place during grinding, preventing shifts or tilts.
3. **Downward Force Stability:** During deburring or edge rounding, the combination of vacuum hold and the operator's light downward guide pressure ensures the part remains stable. This delivers precise, consistent results on oversized components.

ERSM®RMD Models in Comparison

Models	RMD-150	RMD-162	RMD-165
Material thickness	1-150mm	1-150mm	1-150mm
Working range of cantilever	1200mm×360°	1400mm×360°	1500mm×360°
Vacuum operating area	325* 225mm	300×300 mm	330×300 mm
Sand Size	φ150mm	φ150mm	φ150mm
Brush Size	φ150mm	φ162mm	φ165mm
Grinding Head Power	1.2kw	0.75kw	0.75kw
Grinding Head Quantity	1	2	2
Upper Platform Workpiece	1100×700mm	1200×750mm	1000×800mm

More Options tools for Manual Deburring

Hard for the removal of hard burrs. Medium for the removal of other (various) burrs.

Pregrinding, light deburring and finish grinding.

Pregrinding, primary burr removal.

Primary and secondary burrs + strong edge roundings.

Deburring and edge rounding of various metals.

Deburring and strong edge rounding of stainless steel with bigger radius.

Edge rounding and fine surface pattern for aluminium and plastic.

Deburring and edge rounding of (galvanized) thin plates and parts.

Removal of oxide layers.

Deslagging residues.
