give me the download link for onvif camera c++ project

I'm checking for a direct download source for an ONVIF camera C++ project and prioritizing official or well-known repositories.

Thought for 10s

Here are good download sources for an **ONVIF camera C++ project**:

Recommended

- **libonvif** — C++ client-side ONVIF library with CLI and GUI tools for Linux, macOS, and Windows: [GitHub](#) +1
- **rapidonvif / onvifcpplib** — gSOAP-based ONVIF C++ library with client and server support: [GitHub](#) +1
- **ONVIF-HTTP-code** — smaller C++ ONVIF client example project: [GitHub](#)

Official ONVIF developer resources

- ONVIF's resources page links to external developer projects and examples, but it does **not** appear to provide an official ONVIF-maintained C++ library itself: [ONVIF](#) +1

Direct links

- [libonvif GitHub](#)
- [libonvif SourceForge download](#)
- [rapidonvif GitHub](#)
- [onvifcpplib GitHub](#)
- [ONVIF-HTTP-code GitHub](#)

For most cases, I'd start with **libonvif** if you want something practical, or **rapidonvif** if you want a more gSOAP-centered C++ ONVIF implementation.
